

- 19 Total Pages! - Smart Baby Series! - Excellent early learning and development tool! - Babies are never too young to start to learn! - Great aid for travel: car rides, plane, & fussy baby moments! - Mini Editions are free of Flash Card pages - Each object/word/page is slightly different to encourage different focal points for baby! Newborns can only see what is close up & right in front of them; those smart little brains are soaking up every single second of their exciting new life! Infant eyes are developing each day. It is extremely beneficial for their brains to see images in high contrast. With the black background these black, white, & red colors & artistic illustrations of musical instruments, this is perfect for their developing brain & eyes. Babies can start very young identifying & learning images, colors, words, & the sound of your voice as you read to them. They enjoy this special bonding time of reading & looking at the high contrast colors. Both moms & dads, can benefit also, sharing in this peaceful quality educational time with their babies. This book will grow with your child into their toddler years! I was personally inspired to make this book because I am a mother of a baby as well! I wish I had made this book while my baby was in the infant stage! I would have used it every day, especially on those car rides & outings when a high contrast book would have been very handy to distract, & mesmerize her! Having this book loaded on my cell phone using one of my reader Apps would have been a huge relief! We are currently out of the infant stage, but even still, she loves this book! I hope your precious little baby will love it too! I look forward to sharing many new future books with you & your family! Follow me on Twitter @IsedlePub for current updates! A recent study in the Journal of Developmental and Behavioral Pediatrics Studies states: children who were read to as newborns have a larger vocabulary, as well as more advanced mathematical skills, than other kids their age. There's also a direct link between how many words a baby hears each day and her language skills. One study found that babies whose parents spoke to them a lot scored higher on standard tests when they reached age 3 than children whose parents weren't as verbal... after reading to your newborn for a while, you'll actually notice your little one responding to the rhythmic movement of your voice with her arms and legs... From 0 to 3 months, your child will start focusing his or her eyes on simple patterns on the pages. Reading picture books presents your newborn with a variety of shapes, letters and colors that she will begin to recognize as the months go on. --- Here is some vital information concerning baby eye development from the American Optometric Association - Up to about 3 months of age, babies eyes do not focus on objects more than 8 to 10 inches from their faces. At birth, babies vision is abuzz with all kinds of visual stimulation. While they may look intently at a highly contrasted target, babies have not yet developed the ability to easily tell the difference between two targets or move their eyes between the two images. Their primary focus is on objects 8 to 10 inches from their face or the distance to parents face. During the first months of life, the eyes start working together and vision rapidly improves. Eye-hand coordination begins to develop as the infant starts tracking moving objects with his or her eyes and reaching for them. By eight weeks, babies begin to more easily focus their eyes on the faces of a parent or other person near them. For the first two months of life, an infants eyes are not well coordinated and may appear to wander or to be crossed. This is usually normal. However, if an eye appears to turn in or out constantly, an evaluation is warranted. Babies should begin to follow moving objects with their eyes and reach for things about 3mo
